

IMDB (25 Points)

By using your imagination and your design skill, we need you to create a project like IMDB (<https://www.imdb.com/>) that must include the following:

- 1- User creates an account. **(2 points)**
- 2- User login to his/her account and edit his/her profile (profile image, first name, last name, favorite movies, favorite actors, favorite directors), and please note that the user can add his favorite movies, actors, and directors from a dropdown list that filled from the data added by the admin in point 3, 4 and 5. **(2 points)**
- 3- Admin create, read, update and delete movies' profiles, which include (movie name, movie images, actors exist in the movie, the director of the movie), and by the way, if we clicked on the actors and the directors that exist in the movie then it will navigate to their profiles. **(2 points)**
- 4- Admin create, read, update and delete actors' profiles, which include (first name, last name, age, movies that he participate in), and by the way, if we clicked on the movies that the actor participated in, then it will navigate to the movies profiles. **(2 points)**
- 5- Admin create, read, update and delete directors' profiles, which include (first name, last name, age, movies that he produced), and by the way, if we clicked on the movies that the director produced, then it will navigate to the movies profiles. **(2 points)**
- 6- Author can search for movies, actors, and directors by name, and open the profiles of the selected movies, actors, and directors to check their latest work. **(2 points)**
- 7- User can open movies' profile and write comments. **(2 points)**
- 8- User can like or dislike movies. **(2 points)**

Please note that you are not allowed to use a built-in template, which means that you must create the template by yourself, and don't worry because we don't need a perfect template, we just need a nice one. **(4 points)**

Finally, each team member will be asked a question on Asp.net. **(5 points)**
